

ABSTRACT OF THE DISCLOSURE

A camera accessory case is mounted on a camera connecting plate of a camera stand, and includes a casing body and an anchoring unit. The casing body has a bottom wall, a peripheral wall extending from the bottom wall, and a casing axis transverse to the bottom wall. The anchoring unit has a plate connecting portion mounted on the camera connecting plate, and a casing connecting portion connected pivotally to the plate connecting portion and further connected to the peripheral wall such that the casing axis can be disposed in an upright position even when the camera connecting plate is tilted.
